

April Webinar Recap — What You Missed

Hosted by Jamie Patterson with guest Eric Bledsoe (AI professor at Lipscomb University, \$154K in AI revenue over the last 60 days). A plain-English rundown of the first 90 minutes — for anyone who registered but couldn't catch it live.

What the Webinar Was Really About

One idea: **AIOS (the AI Operating System) is the most powerful AI play right now**, and the window to capitalise on it is short.

If you've been buried in noise — Claude Code this, OpenClaw that, N8N the other — Jamie and Eric cut through it and laid out what to sell, who to sell it to, and how much to charge.

Three attendee types named at the top:

1. People who've watched hundreds of hours of AI content but don't know what to actually offer clients.
2. Agency owners stuck rebuilding bespoke systems for every client and unable to scale.
3. Solo founders drowning in admin work.

AIOS solves all three.

What is AIOS?

A wrapper around a business that runs sales, ops, marketing, data, support, and finance. The only real bottleneck is "the human in the loop."

Replaces the old N8N + Zapier Frankenstein stacks. Liam introduced it publicly ~2 months ago — most business owners don't know it exists.

The numbers Jamie put on screen:

- 312% uplift in closed deals across the Accelerator since AIOS launched.
- Roman, 16, made \$8K in his first two weeks.
- Tyler sold four AIOS systems in two weeks; one is a \$4,500/month retainer.
- Eric did \$154K in 60 days, on track for \$200K+ this month.

What clients experience:

- 2–3 hours back per day in week one.
- 60–90% of routine tasks automated within 30 days.
- An e-com founder (\$10M/year) saw conversion jump 50%, saved \$100K in staff costs, and her ROAS went 3x → 8x in the first 7 days.

Eric's Story

Eric is the case study the whole webinar revolves around.

- **Feb 2025:** At his son's soccer game. Another dad asked to pay him to teach him AI. First \$1,750 SOW. Started an LLC.
- **May 2025:** Joined the Accelerator as a coach. Doubled revenue every three months — \$5K, \$10K, \$15K.
- **March 2026:** AIOS landed. Revenue exploded to \$154K in 6–8 weeks.

Worth noting: Eric is **not technical**. He doesn't write code. He didn't even use the Claude Code CLI until 2–3 weeks before the webinar. His line: *"I'm not an AI guy, I'm a business guy who knows enough about AI to serve other people."*

A side benefit of Accelerator networking: he landed a graduate professorship in AI at Lipscomb University in Nashville. The professorship came *after* the consulting work, not before.

How Eric Finds Clients (No Ads, No Cold Outreach)

Zero cold outreach, no ads, no DMs. He hasn't even told his existing network or former clients yet.

His approach: **"Loudest sound on the quietest channel."**

- Shows up at in-person events: Entrepreneurs and Espresso meetups, masterminds at the local bank, business lunches at the university, industry conferences.
- His biggest unlock: a six-week book-study mastermind at his bank with ~20 business owners. Four of them approached him by the end — he never pitched.
- Becomes "the AI guy" in his city. Now averaging **5–6 referrals per sale**.
- Stacked credibility matters: AAA-certified + university professor + Accelerator track record. People don't know who to trust in AI right now.

On niching: don't do it too early. Go wide, cut the bottom 20% of clients constantly until a niche emerges.

The Sales Process (No "Close")

1. **Lunch first.** Listens for what's keeping them up at night — usually taxes, payroll, hiring.
2. **Sell the audit, not the solution.** ~\$1,500 per stakeholder conversation. Price acts as a filter — anyone who balks isn't his client. He's not "fixing" or "saving" businesses; he wants growth clients.
3. **U-shaped interviews.** 3 hours with the ownership group, 90 minutes with each key stakeholder. Records everything (Granola, Plaid). Hard cap of three meetings/day.
4. **The "cookbook."** Findings written in plain English on top, technical spec underneath. Owners don't speak API or Claude.

5. **The presentation = the sale.** A few slides ending in a live demo — his "puppy dog close." Hand them the puppy. Demos run on his Claude Code setup; he leaves the presentation on a URL so they can play with it after.
6. **Modular pricing menu.** A calendar with toggle-on/toggle-off modules. Owners stop asking "should I?" and start asking "which ones?" One owner cut him off five minutes in: *"I don't need to hear anything else, we want this no matter what."*

Eric's Pricing

Real numbers from a recent quote:

- **Architecture (AIOS foundation):** \$10,000 for the first employee. \$2,500 per additional seat.
- Modular add-ons stack on top.
- Executive side and operations side sold separately. Of his \$200K, **one company alone was \$124K** (bought both). The other \$80K = small teams and individuals.
- Pricing is anchored to four value levers: cash-on-cash savings, time returned, pain/risk avoided, future opportunities unlocked. He charges **10–20% of provable value**.
- Prefers **large cash up front** over retainers: *"the thrust required to escape gravity is worth having the cash up front."*

One story that landed: he sold a setup on a phone call while driving, two days before the webinar. Offered \$2,500 DIY (here are the files) or \$7,500 to sit with the guy for a week. Guy said "why would I ever do it myself?"

How He Delivers (6 Steps)

1. **Audit / Discovery (Week 1)** — on-site interviews. Writes tasks out like a service manual. Once you do that, almost any job is replaceable on top of an AIOS.
2. **Process & analyse** — builds the cookbook (one doc, plain English on top, technical detail underneath).
3. **Build** — splits work into "Eric only" (what he builds in Claude Code) vs developer work. AIOS is built *on* Claude Code, but he doesn't expose the CLI to clients.
4. **Install** — physically. Goes computer-to-computer with a hard drive. Installs WhisperFlow too.
5. **Educate** — "Lunch and Learns" once a week. In-person beats remote because team members tutor each other.
6. **Ongoing modular sales** — clients call asking "I wonder if it can..." Answer is yes 90%+ of the time. LTV compounds.

Important nuance: business owners don't want CLI. If a prospect *does*, they're a tech founder, not his client.

The Mindset Stuff

Lines from Eric that landed in the chat:

- "Owners don't buy AIOS, they buy outputs." Sell the windows and the view; the architecture just makes them possible.
- "You don't sell widgets, you sell discoveries." The thing the client *thinks* they want is rarely what you end up selling them.
- "I get paid to do the audit." Like a surgeon running diagnostics before surgery.
- "Half of it is being a user." If you're not running AIOS yourself, you'll never have the conviction to sell it.
- On urgency: "It's urgent for them and for you."

Why The Window Is Closing

- Same pattern as chatbots (Botpress) and voice agents — windows lasted 6–12 months before flooding.
- Google Trends shows Claude Code searches spiking right when Liam introduced AIOS.
- ~9 out of 10 business owners don't know AIOS exists (probably more like 99%+).
- A full AIOS install takes 3–12 hours. You could start tomorrow and be selling within a week.

Two paths: figure it out alone (and get left behind in six months), or get in the room with people doing it.

The Offer

The Accelerator pitch at the end:

- Plug-and-play AIOS modules (intelligence engine, command center, slash commands like `/onboard-client`, dashboards, content machine, data pipelines).
- Unlimited 1-on-1 development coaching (not group Q&A).
- A–Z course on selling, installing, finding leads.
- Hand-picked consultants — Eric is one (800+ coaching calls inside the program).
- Dedicated success manager checking in every two weeks.
- Daily workshops, build-alongs, office hours.
- 4,000+ member network.

Pricing:

- Standard admission: \$5,700.
- Stacked value: ~\$32K.
- Live offer: **\$5,000 USD** for 6 months full access.

- Money-back guarantee tied to landing paying clients.

TL;DR

AIOS is sellable right now to in-person business owners for \$10K+ per architecture install plus modular add-ons. Playbook: lunch → audit → live demo → toggle menu → install → ongoing modules. Eric is doing \$200K/month with no ads, no outreach, no coding. The window is roughly 12 months.
