

Develop a backup plan

Step 1

Identify the person, team, or device that will complete backups. For this activity, you have three choices:

- Store manager
- IT team
- Automated backup system

Be sure to explain your choice.

Step 2

Identify the types of data that the company should back up. Your answer must include one or more of the following types:

- Employee records
- Financial records
- Customer data
- Business documentation
- Intellectual property
- System data

List one example for each data type that you identify.

Step 3

Identify the type of daily backup that your company should perform:

- Full
- Differential
- Incremental

To make your choice, consider which backup type is best suited for a large retail franchise. Explain your choice.

Step 4

Use the 3-2-1 rule to identify where your company should store its backups.

Which types of storage will you use, and where will backups be located?

Be sure to justify your choices using the 3-2-1 rule.

Step 5

Determine when your company should perform backups: daily, weekly, or a combination of both.

Justify your choice.
